PROFILE

Associate Data Scientist/ AI Engineer with hands-on internship experience in machine learning and NLP. Skilled in building predictive models, time series forecasting, and dashboards with data analysis using Python and modern AI tools. Experienced in working with real-world financial data during an internship, applying analytical techniques to generate insights.

SKILLS & COMPETENCIES

Relevant Coursework :

- Programming
 - Python, R, C
- Machine Learning
 - ML model
 - Deep Learning
 - Transformer
 - LLMs
 - Time Series Prediction
- MLOps
 - CI/ CD pipeline
 - A/B Testing
 - FastAPI Framework
- Other AI
 - RAG
 - Embedding
 - Fine Tuning LLM
 - OpenAI API, Llama API
 - Llama Index/ Model

EDUCATION

Bachelor of Science in Statistics (Special)

Department of Statistics and Computer Science, Faculty of Science, University of Peradeniya.

- GPA : **3.61**

EXPERIENCE

Central Bank of Sri-Lanka Data Science Internship

11/2025 – 04/2026

1. NLP-Based CCPI Predicting System Using Financial Articles

- Preprocessing articles and generating **FinBERT embeddings** of articles
- Applied **topic modeling** to the BERTopic model with tuned UMAP and HDBSCAN.
- Constructed monthly topic-articles probabilities.
- Predict the CCPI value** using microeconomic data.

2. Automated Vehicle Market Data Pipeline using R (web scraping)

- Implemented modular scraping functions, dynamic user-agent rotation, HTTP retry logic, and multi-session parallelization to generate analysis-ready datasets for market analytics.

- Database
 - MySQL
- Cloude
 - Azure
- Interactive Data Dashboard
 - Power BI
- Web Scraping
 - Python, R studio

SOFT SKILLS

- Communication Skill
- Problem-Solving Skill
- Critical Thinking
- Effective Communication
- Presentation skills
- Time Management

3. Clustering of the Vehicle dataset

- **Reduced** 10K+ high-cardinality **categorical labels** using **LLaMA 8B**.
- **Applied CatBoost encoding** and dimensionality reduction such as UMAP, PCA, Truncated SVD.
- Compared K-Means, Mini-Batch K-Means, and HDBSCAN cluster algorithms.
- Selected **HDBSCAN** based on the **highest silhouette score** and lowest deviation.

4. Automated Economic Report Validation System

- Automated report checking tasks.
- Converted PDF reports into **OCR-processed raw text**.
- Applied preprocessing techniques to noisy OCR raw text outputs.
- Extracted financial data values using LLaMA 8B.
- Created data frames
- Generated structured **Excel validation** outputs for audit-ready reporting.

OTHER PROJECTS

1. Stock Price Prediction of Apple Inc.

- Developed an LSTM model to predict future values of multiple variables.

2. Predictive Modeling for Income Classification of Adults in the USA

- Built a Random Forest model and achieved 86.68% accuracy.

3. Sentiment Analysis for Tweet Classification

- Developed LSTM and BiLSTM neural network models to classify tweets as positive or negative.

4. Multivariate Data Analysis of Framingham Heart Study Dataset

- Applied principal component analysis, Linear discriminant analysis, Factor analysis, and K-Means clustering.
- Identified three principal components, three factors.
